# MEIC GPI
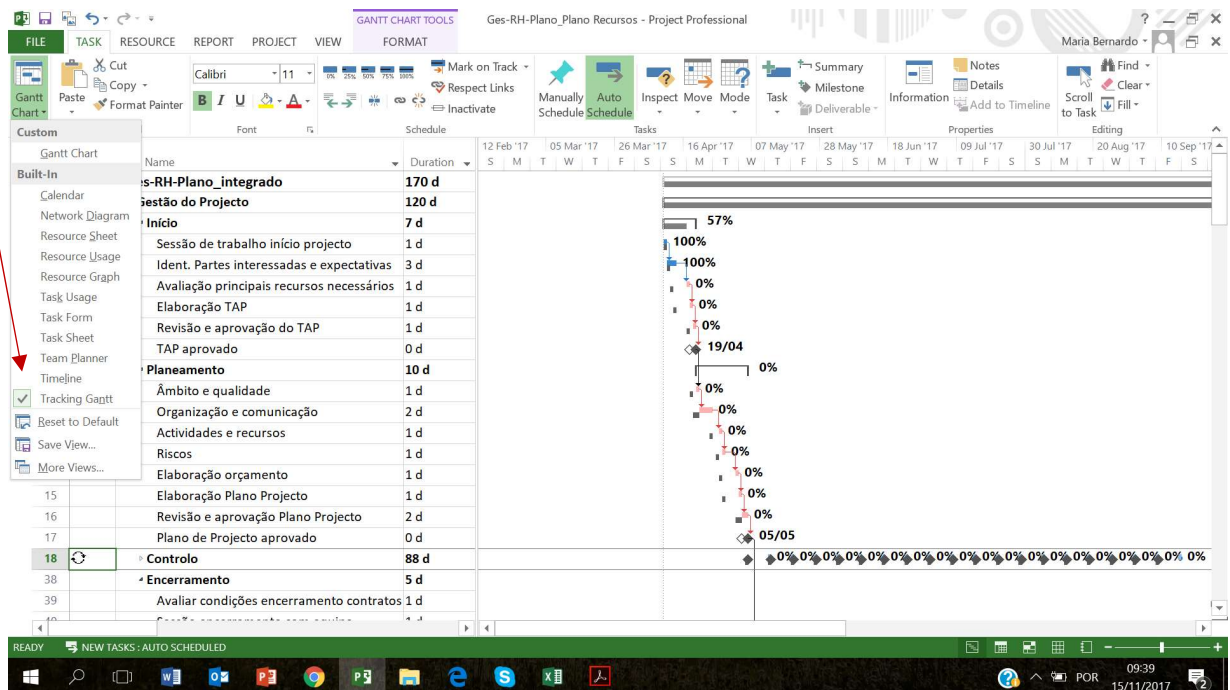

MS Project support document

for project execution

Versão: 1.0

Create project baseline

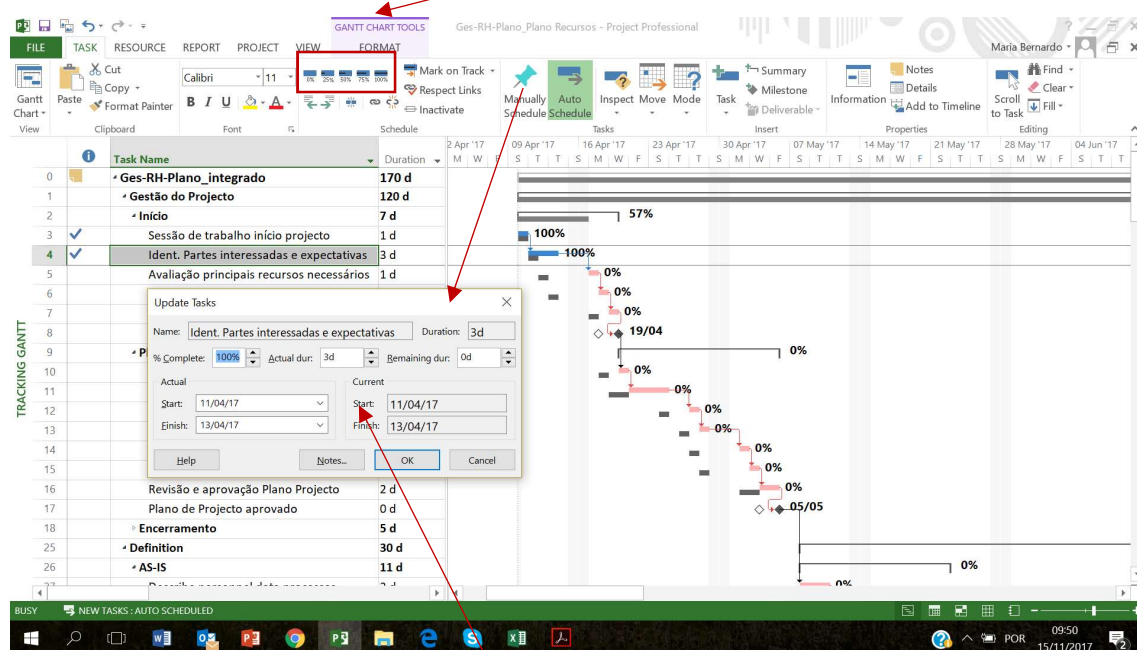

Use Traking Gantt View

Update activities (start date, duration, remaining duration, …)

To indicate activity execution percentage (concluded as planed = 100%) assuming the planed duration.

If you need to indicate a different start date, finish date, duration or "remaining duration", use the "update task" functionality

After updating activities requiring "update task" you can update all activities until data "dd-mm-yy". MSP assumes that the activities were performed as planned.
